

In the Specification:

On page 2, following lines 1 and 2 at the top of the page, insert the new paragraph as follows:

Further known from British patent specification GB 636,858 A is a wall plug which is formed by a sleeve provided with a plurality of axially extending recesses. The recesses consist of folds whose walls meet at the base of the fold. This known wall plug is not formed and used as a supporting sleeve. As an inserted wall plug, its purpose is to provide a secure seat in a prepared hole in a wall and to prevent its rotation when a screw is being inserted and screwed in.
